VEGETABLES - FRESH MARKET

ANNUAL SUMMARY

1965

Production of the 27 principal fresh market vegetables and melons in 1965 was 4 percent more than last year and 3 percent above average, the Crop Reporting Board announced today. The production of 222.0 million hundredweight compares with 214.1 million hundredweight in 1964 and the average annual production of 215.4 million. Major vegetables and melons contributing most to the increase from last year were carrots, celery, sweet corn, honeydew melons, lettuce, onions, and watermelons. Lettuce and onion production were record highs in 1965. Value of the principal vegetable and melons crops totaled 1,022 million dollars, 5 percent above last year. Tomatoes and lettuce were the two leading crops in value, and their combined total accounted for 37 percent of the U. S. figure.

The 1965 strawberry crop of 461 million pounds was 16 percent less than last year and 8 percent below average. Production for fresh market accounted for 59 percent of the 1965 crop and production for processing for 41 percent. Also, included in this report are estimates for mint oil valued at 16.9 million dollars in 1965.

The leading States in the production of fresh vegetables and melons for 1965 were: California, Florida, Texas, Arizona, and New York. These five States accounted for 62 percent of the acreage, 68 percent of the production and 73 percent of the value of the vegetables and melons produced in the Nation. California continued to dominate the production of fresh vegetables and melons with 22 percent of the United States acreage and 31 percent of the production. Ranking of the 5 leading States for acreage, production and value in 1965 were the same as for 1964.

LEADING FRESH MARKET VEGETABLE STATES IN 1965

Rank	Harvested Acreage		Production		Value	
	State	Percent of total	State	Percent of total	State	Percent of total
1	California	22.4	California	31.1	California	35.1
2	Florida	16.0	Florida	14.8	Florida	17.7
3	Texas	14.2	Texas	10.0	Texas	8.5
4	Arizona	4.8	Arizona	6.4	Arizona	7.6
5	New York	4.4	New York	5.9	New York	4.2

Estimates in this publication relate primarily to fresh market production. While estimates for many vegetable crops include only fresh market production, those for a few crops, such as broccoli, cauliflower, and carrots, include substantial quantities processed. For asparagus and strawberries, which are perennial crops providing production for both fresh market and processing outlets from the same acreage, a utilization breakdown is given in addition to total production.

"Acreage for harvest" in this summary embraces total acreage available for harvest, including mature acreage abandoned or only partially harvested because of low prices, shortage of farm labor, and other economic factors. Planted acreage in this report includes in addition to acreage for harvest, acreage lost or abandoned due to natural causes and acreage abandoned prior to reaching maturity because of economic conditions. Acreage lost and replanted to the same crop early enough to be harvested in the season for which it was originally intended, is counted only once. Acreage lost and replanted to the same crop for harvest in a later

season is considered to have been planted in both seasonal classifications but is included as acreage for harvest in the second season only. Acreage lost and replanted to another vegetable crop is included as planted acreage in estimates for both crops but as acreage harvested for the second crop only. Both planted and harvested acreage published for asparagus and strawberries include only bearing acreage and exclude non-bearing acreage planted for harvest in future marketing seasons. Value is for the crop year and does not correspond to calendar year income. All 5-year averages of State and group totals are simple averages of annual data.

This summary provides fresh market estimates for the 27 principal vegetables and melons grown commercially in the more important producing States. These estimates provide basic statistics on over 80 percent of the national output of all vegetables and melons grown for fresh market sale. It has not been possible to include all vegetables in all States in this program.

These data are based upon information secured from growers, shippers, processors, public agencies, and other sources.
